REF: REACH STATEMENT

The REACH (Registration Evaluation and Authorisation of Chemicals) came into force on 01st June 2007. Pre-registration of chemicals commences in June 2008, and closes in December 2008.

Registration of chemicals is carried out in phases depending on the volume of manufacture, and the classification of the chemical. The earliest date for registration is December 2010, and the latest is June 2018.

We are currently ensuring all of the materials that we use in our manufacturing process will be pre-registered before December 2008. This will allow us to keep our current product range available on the market at least until the deadline for full registration has passed.

We are confident that the vast majority of our range of products will remain available. We are not aware that we will have to withdraw any of our current product range from the market, but in the event that we are obliged to make any modifications to our existing formulations we will inform our customers as the earliest opportunity.

Regards

Neil Love
